

Client Project Case Study:

Title of Project:	Cleaning of Whisky Storage Vessels
Thomson Bethune's Role:	Value Engineering Facilitators
Client Sector:	Private Industrial
Client:	Diageo
Project Cost:	Not applicable
Location:	Various locations in Scotland
Date:	2002

Project Scope:	
Background to the project:	Our client required a value engineering study to consider the process engineering requirement for cleaning storage vessels once they had been empty and before being re-filled with spirit.
The value Thomson Bethune added to this project:	Thomson Bethune facilitated a value engineering study with a team comprising the Client's own engineering and commercial personnel. The facilitators used the value engineering job plan to structure the study. The outcome of the study produced a considerable saving in the cleaning of these storage vessels and also significantly improved the environmental impact of the cleaning process.
